SUMMARY

Computer Science & Artificial Intelligence student (Software Engineering major, Human-Computer Interaction concentration) with hands-on experience across the UX/UI design process — user research, personas, user flows, wireframing, and high-fidelity prototyping in Figma — combined with front-end development experience in React.js and responsive, mobile-first web design. Proven ability to translate research and usability feedback into iterative design improvements, and to learn new languages and tools quickly (Python, Java, C++), with strong motivation to build proficiency in Unity and C# for real-time 3D application development. Comfortable collaborating with developers and stakeholders in agile, fast-iterating environments.

TECHNICAL SKILLS

UX/UI Design & Research: User Research, User Personas, User Flows, Wireframing, High-Fidelity Prototyping, Usability Testing, Design Systems & Style Guides, Human-Centered Design, Responsive & Mobile-First Design

Design Tools: Figma, Microsoft Office

Front-End Development: React.js, HTML5, CSS3, JavaScript, REST API Integration, Reusable Component Design

Programming Languages: Python, Java, C++ (foundation for Unity/C# development)

Version Control & Collaboration: Git, GitHub, Agile/Collaborative Workflows, Debugging

Languages: Arabic (Native), English (Professional Working Proficiency)

WORK EXPERIENCE

Front-End Developer Intern — PROART

Jul 2026 – Present

- Collaborate with cross-functional teams in an agile environment to design and build responsive, user-facing web interfaces using React.js, HTML5, CSS3, and JavaScript.
- Translate Figma designs into pixel-accurate, responsive front-end components, maintaining visual and functional consistency across devices and screen sizes.
- Build and integrate reusable React components with REST APIs to connect front-end interfaces with back-end services.
- Conduct UI testing and debugging to optimize application performance; participate in peer code reviews and Git-based version control workflows.

PROJECTS

FocusFlow — UX/UI Case Study (Figma)

- Conducted user research and developed user personas to guide design decisions for a study-productivity platform, applying human-centered design methodology.
- Mapped user flows and produced low- to high-fidelity wireframes and interactive prototypes, iterating on layouts based on usability feedback.
- Established a consistent design system and style guide to maintain visual coherence across screens.
- Designed responsive, mobile-first interfaces and applied HCI principles to improve task efficiency and overall usability.

Product Catalog — React.js

- Built a responsive product catalog application with reusable UI components and REST API integration. (github.com/nehalsallam76-cmyk/product-catalog)

Merath — Python

- Built a rule-based Islamic inheritance calculator implementing structured, logic-driven decision flows.

Auction Management System — C++

- Developed a customer and auction management application using object-oriented design principles.

EDUCATION

Bachelor of Science in Computer Science and Artificial Intelligence (CSAI) — Zewail City of Science and Technology, Giza, Egypt Expected Jun 2028

Major: Software Engineering | Concentration: Human-Computer Interaction (HCI)

LEADERSHIP & ACTIVITIES

YLY (Youth Leaders Foundation) — Ministry of Youth and Sports

- Supported youth initiatives and coordinated activities as part of the RP program, strengthening communication and teamwork skills.

The Gate Club

- Coordinated member communication and organized club activities in a collaborative team setting.
